5 interchangeable implements powered by a single engine.

MULTIMATE.

FIVE TIMES THE EFFICIENCY... AND MUCH MORE BESIDES

VERSATILITY

Multimate is the all-in-one tool that makes gardening 5 times more efficient.

At its centre is one big heart: a compact, lightweight and quiet engine which can power up to 5 different implements.

Ideal for frequent gardeners with diverse needs: mowing the lawn and the edges around walls and fences, pruning trees and hedges, trimming bushes, and blowing away leaves and debris.

No matter what the needs of the private user, one big heart takes care of them all.

EASE OF USE

Multimate provides the user with five machines that can be interchanged with a single action.

Simply **press a button and rotate** to change from trimmer to pruner, or from blower to brushcutter to hedgetrimmer. All this **in just five seconds.**

The patented **REV&GO** lock-release system offers **maximum practicality** and total **safety** during both operation and changeovers, thanks to the automatic engine locking system.

PERFORMANCE

The heart of **Multimate** is its state-of-the-art powerplant: **an all-new, ecologically advanced 2-stroke engine which cuts emissions by 80%** and complies with Euro 2 emissions regulations.

Much **quieter** than a conventional 2-stroke engine, it is ideal for frequent use in built-up residential areas.

Lightweight (less than 4 kg) and equipped with a **sophisticated, 3-spring anti-vibration system** which completely isolates the engine from the rubber handgrip, ensuring comfortable use.

Engine designed to guarantee **40% lower fuel consumption** compared with conventional 2-stroke engines: this translates into less frequent refuelling (45 minutes operation on a full tank) and very low running costs.

For pruning all kinds of tree branches and foliage up to three metres from the ground, to keep growth under control.

- The 10" bar with 3/8" pitch enables effortless cutting of branches 10-12 cm in diameter.
- The shaft arm is rubber coated to ensure a safe grip and minimise the transmission of vibrations to the operator.
- The semi-transparent chain oiler reservoir enables the operator to read the oil level without removing the cap.
- The handgrip can be rotated by 90° for a choice of two operating positions, enabling the bar to be adapted according to the branches to be pruned.

BASIC FEATURES

- Shaft arm length: 1.5 m
- Bar length: 10" (250 mm)
- Chain: Oregon 3/8" x .043"
- Chain thickness: 1.1 mm
- Fuel tank capacity: 0.165 dm³
- Weight: 2.4 kg
- Dimensions: 139 x 13.5 x 13.5 cm

MULTIMATE EASY KIT

Exclusive and practical storage kit for **stowing machines and engine unit in the smallest possible space.**

- Designed to take up minimum space and **fit unobtrusively into any setting.**
- Allows for storage and **maintenance of the machine components without the need for auxiliary** supports.
- **Wall mountable.**
- Foldable and therefore easy to transport.
- When not in use, the components can be secured in the special kit for **maximum safety**, preventing accidents to adults, children or animals that may come into contact with them.

CONVENIENT

With a single engine body for five implements, **Multimate** represents an extremely handy piece of equipment.

A single engine requires only **one maintenance check, one fuel refill** and one storage space.

The high frequency of use **reduces** the risk of prolonged **idle periods** and the ensuing need for engine maintenance.

Using a single machine enables the operator to **save time, trouble** and, most importantly, **money**. By purchasing **Multimate** with at least **three implements**, the consumer can **save up to 50%** compared with the same number of equivalent stand-alone machines.

STORAGE

Multimate has been designed to take up the **smallest possible space**, bearing in mind the increasingly smaller dimensions of modern houses and garages.

Diminutive, lightweight and compact, it is supplied with a **special kit** for storing both the engine unit and implements.

The kit is wall-mountable and provides instant access to the machine components, both for use or simple maintenance.

REVOLUTIONARY ATTACHMENT SYSTEM

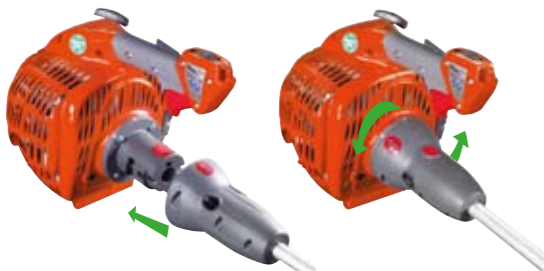

Multimate is based on a highly intuitive **lock-release system** which is so user-friendly and safe that it can be operated by even the least expert users.

Multimate features the patented  system, a quick-fit mechanism which enables the operator to switch from one implement to another within seconds and without the need for tools: simply insert an implement and rotate to attach it, or press a button and rotate to release it.

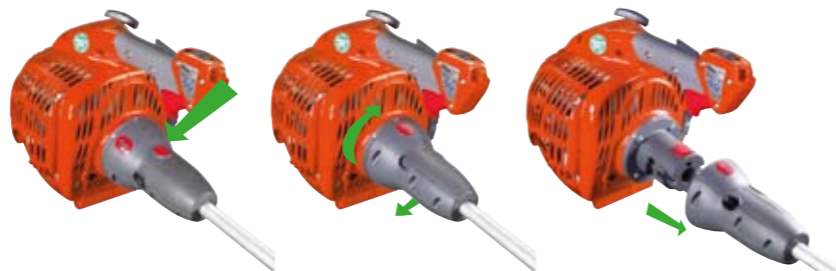

From one implement to the next in just 5 seconds

ATTACHMENT PROCEDURE

RELEASE PROCEDURE

ENGINE UNIT

A single, powerful **2-stroke engine which is quiet, eco-friendly and features an innovative 3-spring anti-vibration system** which completely isolates it from the handgrip: this is the revolutionary heart of **Multimate!**

■ **Lightweight engine:** less than **4 kg** for total comfort and manoeuvrability.

■ Utmost respect for the environment: the 30 cc EURO 2 engine produces **up to 80% lower emissions** compared with conventional 2-stroke engines.

■ **Lower fuel consumption (-40%** less than traditional 2-stroke engines): over 45 minutes operation on a full tank.

■ **Significantly lower noise emissions** than other 2-stroke engines in its class.

■ **Ergonomic rubber handgrip** which absorbs vibrations: all controls are neatly arranged within easy reach.

■ Built-in choke lever and a clearly visible, easily accessible primer **to facilitate starting in any conditions.**

■ Snap-fit filter cover for swift inspection and cleaning of the foam filter.

■ Supplied with harness which attaches to the front of the handgrip, providing additional support during operation.

■ **Safety Control** system: the engine stops as soon as the operator tries to detach the implement from the drive unit.

■ The implement can be locked in 2 positions (0° and 90°) for maximum versatility of use.

BASIC FEATURES

- Engine: 30 cc EURO 2
- Power: 1.0 HP
- Primer for introducing fuel into the carburettor, ensures simple starting every time
- Foam filter which guarantees an optimum filtering action and long cleaning intervals
- Digital coil to reduce effort during start-up and limit fuel consumption
- 3-spring anti-vibration system
- Fuel capacity: 0.37 dm³
- 2-point implement attachment (0° and 90°)
- Weight: 3.9 kg
- Engine unit dimensions: 37 x 26 x 36.5 cm

BRUSHCUTTER

The ideal tool for cutting grass, weeds, bushes and shrubs in areas not accessible with other machines. Essential both for cleaning and tidying private premises, and for clearing areas overgrown with untended vegetation.

- Maximum comfort thanks to the ergonomic and adjustable handgrip, which can be adapted to suit the operator's stature.
- Equipped with Tap'n Go head for automatic line release, and 4-blade steel disc.
- Provides a cutting width of 40 cm to ensure superior efficiency in any situation.

BASIC FEATURES

- Shaft arm tube: Ø 22 mm (internal drive shaft Ø 6 mm)
- Cutting components: Ø 105 Tap'n Go head, 2.0 mm line
- 8" disc with 4 blades, thickness 2.0 mm
- Weight: 2.3 kg
- Dimensions: 144.5 x 21.5 x 13.5 cm

TRIMMER

The perfect implement for tending to less accessible corners of the garden, even those with obstacles.

- Ergonomic handgrip of new design: adjustable for adapting to different operator postures and ensuring maximum handling comfort at all times.
- Equipped with Tap'n Go head for automatic line release.

BASIC FEATURES

- Shaft arm tube: Ø 22 mm (internal drive shaft Ø 6 mm)
- Cutting components: Ø 105 head, 2.0 mm line
- Weight: 1.9 kg
- Dimensions: 130 x 27.5 x 13.5 cm

BLOWER

Practical and manoeuvrable, this implement is ideal for trouble-free removal of leaves, shrubs and garden debris. Particular attention paid to enhancing the comfort of the end user.

- Duck-billed nozzle: directs the airflow with supreme precision, removing even wet leaves from the ground.
- Powerful air jet for maximum work efficiency in any conditions.
- Thanks to the adjustable handgrip, the machine adapts to any type of posture.
- The machine's light weight and even distribution ensures optimum balance and extremely comfortable use.

BASIC FEATURES

- Air flow rate: 600 m³/h
- Air speed: 60 m/s
- Multi-directional handgrip
- Weight: 1.6 kg
- Dimensions: 65.5 x 32 x 30 cm

HEDGETRIMMERS

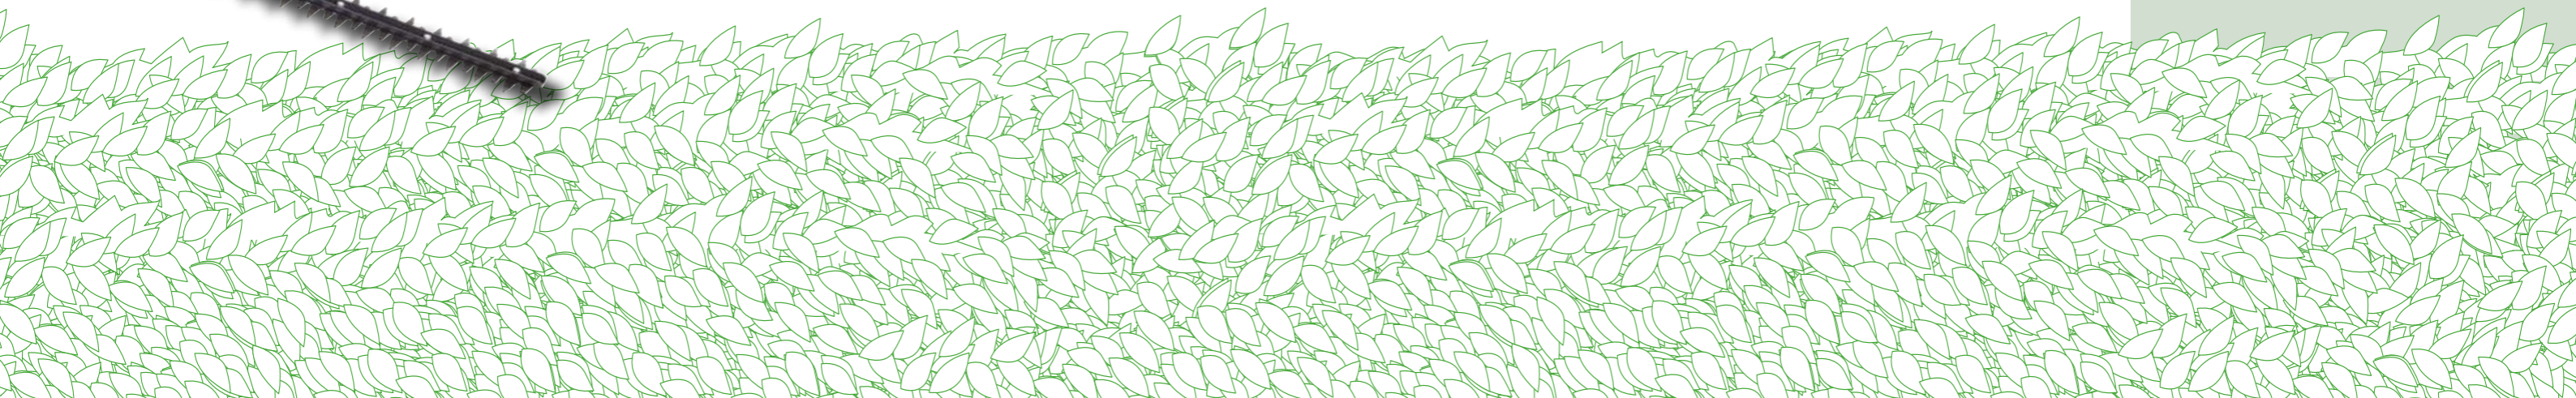

The ideal tool for tidying bushes, hedges and ornamental features. Can be used to cut hedges over 1.5 metres in height with both feet planted firmly on the ground.

- Extreme versatility thanks to:
 - device for adjusting the blade through 12 positions (from 0° to 135°), without the use of tools;
 - 2-position implement fitting (0° and 90°), allowing for operation up against a wall.
- The gearbox is made of aluminium to increase its durability and reduce the overall weight of the machine.
- The steel blade boasts a usable length of 60 cm.
- The optimal length is perfectly balanced to minimise effort during operation.

BASIC FEATURES

- Aluminium gearbox
- Reciprocating cutting action
- Blade length: 600 mm
- Cutting width: 25 mm
- Adjustable through 12 positions from 0° to 135°
- Blade pitch: 30 mm
- Weight: 2.2 kg
- Dimensions: 102 x 28 x 20.5 cm

PRUNER
