

## BEST PRACTICE FOR BATTERY LINE TRIMMERS

**Here are some best practices and tips to get the most out of your battery line trimmer:**

### **1 - READ THE MANUAL**

Familiarize yourself with the manufacturer's instructions and safety guidelines provided in the user manual. This will help you understand the specific features of your trimmer.

### **2 - CHARGE THE BATTERY PROPERLY**

Follow the recommended charging instructions. Avoid overcharging or leaving the battery connected to the charger for extended periods as it can shorten the battery's lifespan. Disconnect the battery once it's fully charged.

### **3 - INSPECT AND MAINTAIN THE TRIMMER**

Regularly check the trimmer for any damage or wear. Ensure that the cutting line is properly installed and replace it when it becomes worn or broken. Keep the trimmer clean by removing any grass or debris that may accumulate during use.

### **4 - CHOOSE THE RIGHT CUTTING LINE**

Select the appropriate cutting line for the job. Thicker and more durable lines are suitable for heavy grass or weeds, while thinner lines are better for lighter trimming tasks. Refer to the manual for the recommended line size.

### **5 - START WITH A FULLY CHARGED BATTERY**

Before you begin trimming, make sure the battery is fully charged. This ensures optimal power and runtime.

### **6 - ADJUST THE CUTTING HEIGHT**

Most battery trimmers have an adjustable cutting height. Set the height according to your preference and the type of vegetation you're trimming. Start with a higher setting and gradually lower it if needed.

### **7 - BE MINDFUL OF SAFETY**

Wear appropriate safety gear, such as safety glasses, long pants, and closed-toe shoes, to protect yourself from debris and potential accidents. Ensure that there are no pets or children nearby while you're operating the trimmer.

### **8 - MAINTAIN A STEADY PACE**

Move the trimmer in a steady and controlled manner, allowing the cutting line to do the work. Avoid rushing or applying excessive force, as this can strain the motor and drain the battery faster.

### **9 - TRIM AT THE RIGHT TIME**

Plan your trimming sessions for cooler parts of the day, such as early morning or evening, to avoid excessive heat exposure. Dry grass is also easier to cut, so consider trimming after rainfall or early in the day when the dew has evaporated.

### **10 - STORE THE BATTERY PROPERLY**

If you're unsure about the best solution for your garden, consult with a professional or visit a local garden centre. They can provide recommendations based on your specific garden needs.
